

STANDARD PORTFOLIO – COATED FABRICS

Woven fabrics with high thermal and chemical resistances, made of 100% BCF (basalt continuous filament) fibers with PUR-based coating. This coating is designed to improve the fabric's stability, the seam strength in case of sewing, the mechanical and handling properties while maintaining the good fire performance. A flexible continuous sheet as component in non-woven laminates, as interlayer in compositions for fire & heat protection, in construction elements and equipment. Standard coating on one side of the fabric. Two sided and customized coatings available on request.

Coating type	Base Weight [g/m ²]	Width [MM]	Min. QTY [LM]
7101	220	1270	50
7101	350	1550	50
7101	630	1580	700
